

Cheat Sheet: APIs and Data Collection

In case you are having issues viewing the lab instructions below or prefer to view the instructions in a new browser tab, [click here](#)

post()	request to a specified URL with data. Create or update POST requests using resources on the server. The data parameter contains the data to send to the server, often in JSON format.	Syntax: <table><tr><td>1</td><td><code>response = requests.post(url, data)</code></td></tr></table> Example: <table><tr><td>1</td><td><code>response = requests.post((https://api.e</code></td></tr></table>	1	<code>response = requests.post(url, data)</code>	1	<code>response = requests.post((https://api.e</code>
1	<code>response = requests.post(url, data)</code>					
1	<code>response = requests.post((https://api.e</code>					
	Send a PUT request to
